
PRESENTING ARC'S SIXTEENTH INDIA FORUM

Digitizing and Securing Industry, Infrastructure, and Cities

JULY 5-6, 2018 • BANGALORE

FEATURED TOPICS:

It's happening fast. Everywhere we turn things and processes are becoming more connected and intelligent. Streetlights, cars, gas turbines, and thermostats stream data. Buildings, refineries, oil platforms, mines, and wind turbines are optimizing asset and operating performance. Parking meters and distributed power grids deliver value to both consumers and operators. Design software can link to additive machines to print parts directly. There are countless ways to conduct your digital transformation journey, too many technologies and suppliers to evaluate, and endless choices to make along the way. Embedded systems, networks, software platforms, augmented reality, and machine learning may play a role as you begin to improve uptime, optimize operating performance, enhance service, and re-think business models. And it's only the beginning.

ARC Advisory Group's Sixteenth India Forum for process and discrete industries is a not-to-be-missed event for all stakeholders – technology solution providers, end users, industry trackers, decision and policy makers, and the media. In an advanced automation and information-driven world, terms such as Industrial Internet of Things (IIoT), Smart Manufacturing, Industrie 4.0, Digitization, and Connected Enterprise are clearly moving past the hype stage to the point where real solutions are emerging backed by strong associated business cases.

This is the age of digitization.
